SUMMARY

Hands-on principal architect, **19+ years**, repeatedly handed a working platform whose foundation had become the constraint and changing it without disrupting the people on it. Consolidated per-customer deployments onto shared **multi-tenant** software as a service (SaaS) infrastructure with dedicated databases for regulated banks, migrated every instance from Keycloak to central single sign-on (SSO) with **zero user disruption**, and decomposed a monolith into **10–15 services** — all on **Java and Spring Boot**, about **11 years across three eras**. Then set VoltusWave's platform standards on Amazon Web Services (AWS) — **Kubernetes and Terraform** adopted company-wide, **Go and DynamoDB** across five sub-teams through design-doc discipline — with infrastructure cost down **25–30%** and deploys from hours to **under 10 minutes**, and built **ten analytics and artificial intelligence (AI) services** for a chronic-care platform on a **LangGraph** runtime, self-hosted models inside the client boundary, over an event-sourced spine holding **9–10 years of patient history**.

- Fortified the **Go** chat service and two **Amazon Kinesis** streams across multiple availability zones with load balancing, failover and disaster recovery, as **HIPAA** certification required
- Deployed **Datadog** observability across production services, bringing the error rate to **under 3%** and making reliability measurable for the first time
- Sealed multi-tenant isolation across **10 production pipelines** — tenant-scoped traversal-source wrapper, **Parquet** partitioning, runtime assertions, per-tenant **Amazon Neptune** for the healthcare-data tier
- Instituted an event-sourced spine on **DynamoDB single-table** design holding **9–10 years** of patient history, with deterministic **Parquet** snapshots queried through **DuckDB**
- Assembled a **10-query** decision-intelligence platform on a **LangGraph** runtime with PostgreSQL checkpoints over **4 reusable archetypes**, self-hosting **Llama 3.1** and embeddings in-VPC
- Drove a measured **Claude Code** and **OpenAI Codex** rollout across a **20-engineer** team, covering daily design exploration, first-cut code and test scaffolding under review
