

Lead AI Platform Engineer

Platform Engineering Team

Engagement	Contract
Full-time contractor, 40 hours per week	12 months, contract-to-hire
Working arrangement	Conversion model
Remote anywhere in India for the first 12 months	Permanent Wolters Kluwer India role, subject to performance and business need
Time-zone overlap	Post-conversion location
6 hours daily with CST, approx. 7:30 PM - 1:30 AM IST	Pune or Chennai, hybrid 3 days per week
Cloud	Core stack
Azure strongly preferred; AWS also relevant	Python, Web APIs, SDKs, GenAI, LLMs and RAG
Assessment	Interview process
GenAI Engineering Skill Test	Technical and behavioural interview

Role Overview

Wolters Kluwer is seeking a hands-on **Lead AI Platform Engineer** for the Platform Engineering Team. This role designs and builds production-grade AI and software services and SDKs, accelerates delivery using AI-assisted development, and partners closely with product and platform teams to ship reliable software quickly.

The ideal candidate is an expert Python engineer who pairs effectively with AI tools, has deep experience with Web APIs, SDK design and cloud platforms, and brings practical production-level expertise with LLMs, RAG and prompt engineering. You provide technical direction for a feature area or service, review others' work and raise the engineering bar without requiring formal people-management responsibility.

Engagement and Location

- **Contract-to-hire:** Start as a full-time contractor for 12 months. Wolters Kluwer intends to convert the role to direct permanent employment in India, subject to performance and business need.
- **India only:** Candidates must be based in India and legally authorised to work there.
- **First 12 months:** Fully remote from anywhere in India.
- **On conversion:** Relocation to Pune or Chennai is required, with a hybrid model of 3 days per week in the office.

Your Skills

Expert Python Engineer: You build resilient, self-healing, scalable systems and APIs.

AI-Assisted Pro: You pair-program effectively with tools such as GitHub Copilot, Cursor or Claude Code while maintaining engineering rigour, code safety and readability.

Bias for Action: You can design, develop, test, validate and deploy production code quickly using the toolchain provided.

Quality Driven: You write high-quality, well-tested code and automate testing, builds, deployments and checks.

Cloud-Fluent: You are comfortable with Azure and/or AWS across serverless, containers and managed services.

Strong Communicator: You explain complex trade-offs clearly to technical and non-technical stakeholders.

Responsibilities

- Architect and implement secure, scalable Web APIs in Python using frameworks such as FastAPI, including authentication and authorisation, rate limiting and observability.
- Design, develop, test, version and publish Python SDKs, including semantic versioning, strong documentation and practical samples.
- Use AI-assisted development tools to accelerate coding, refactoring, test generation and code reviews while enforcing engineering standards.
- Build, deploy and operate applications on Azure and/or AWS, including Azure Functions, App Service and AKS, or AWS Lambda, ECS and EKS, using infrastructure-as-code where appropriate.
- Develop AI solutions using LLMs and RAG, including Azure OpenAI Service, Amazon Bedrock, embeddings and vector stores, with prompt design, evaluation and guardrails.
- Implement robust unit, integration, contract and load testing and maintain strong code coverage and quality gates.
- Instrument services with logging, metrics, tracing and dashboards, and proactively identify and remediate bottlenecks and defects.
- Collaborate with product, data, security and platform teams to define requirements, ship features and meet SLAs and SLOs.
- Mentor developers on Python best practices, AI-assisted development, performance, security and operational excellence.

Experience and Skills Required

- **7+ years** of professional software development experience, including **5+ years of hands-on production Python**.
- **4+ years** building and operating Web APIs at scale using FastAPI, Django or Flask, including OpenAPI/Swagger and contract-first design.
- **3+ years** deploying to Azure and/or AWS using services such as Azure Functions, App Service, AKS, AWS Lambda, ECS or EKS, plus infrastructure-as-code such as Bicep, ARM or Terraform. **Azure is strongly preferred.**
- **2+ years** of hands-on Generative AI experience in production or pre-production, including prompt engineering, LLM integration, RAG pipelines and model or response evaluation.
- Demonstrated daily use of AI coding assistants such as GitHub Copilot, Cursor or Claude Code, with concrete examples of productivity gains and the guardrails applied.
- **3+ years** designing, versioning and distributing SDKs, including packaging, semantic versioning, PyPI or an internal package registry.
- **3+ years** with CI/CD using Azure DevOps and/or GitHub Actions, automated testing with pytest, and quality tooling such as ruff, black and mypy.
- Solid enterprise security knowledge across OAuth2/OIDC, JWT and secrets management.
- Observability experience with centralised logging and tracing, including OpenTelemetry, Azure Monitor or CloudWatch.
- **4+ years** across SQL and NoSQL data layers, plus hands-on use of vector databases such as Azure AI Search, OpenSearch or Pinecone.
- **Lead-level technical ownership:** sets technical direction for a feature area or service, reviews others' code and raises the engineering bar without formal people-management responsibility.

Nice to Have

- Experience in regulated or enterprise B2B information services such as legal, tax, healthcare, finance or compliance.
- Agentic AI or multi-agent orchestration using LangChain, LangGraph or Semantic Kernel, plus MCP-based tool integration.
- Docker, Kubernetes or AKS at scale.
- Exposure to LLM evaluation and observability tooling such as LLM-as-a-judge or prompt-pipeline tracing.

Soft Skills

- Fluent professional English, written and verbal, with confidence communicating with senior stakeholders.
- Comfortable operating with ambiguity and shifting priorities in a fast-moving AI environment.
- Collaborative, low-ego and pragmatic about trade-offs between delivery speed and long-term maintainability.
- Execution-focused and able to own outcomes end-to-end in an agile, cross-functional environment.

Role Logistics

Working pattern	Full-time contractor role, 40 hours per week.
Time-zone overlap	6 hours daily aligned with CST, approximately 7:30 PM - 1:30 AM IST. This is a firm requirement.
Contract term	12 months as a contractor, followed by intended conversion to permanent Wolters Kluwer India employment, subject to performance and business need.
Location	Remote anywhere in India during the contract phase. On conversion, relocate to Pune or Chennai and work hybrid 3 days per week.
Equipment	Bring your own device.
Assessment	GenAI Engineering Skill Test.
Interview process	Technical and behavioural interview.
Expected start	5 October 2026.

Build reliable AI platform capabilities that engineering teams can ship on.
